

Remanufacturing America's Power Grid

Your transformers. Your way.

Upgrade your transformers to match OEM quality in half the time it takes to receive new units.

Substation Transformers

Confidently rebuild your transformers to your specifications, ensuring extended decades of reliability.

Specialize in base ratings from:
10MVA-80MVA, 69kV-230kV

Mobile Substations

Configure and gain commonality of your fleet, achieving maximized performance for many years to come.

Specialize in base ratings from:
5MVA-50MVA, 69kV-230kV

Revitalizing the Utilities Industry

From reenergizing your failing transformers to powering future growth, we're here to expand your possibilities faster than an OEM can provide.

Why Remanufacturing Wins

Get transformers in half the time OEMs can deliver

Remanufacturing Advantages

- Shorter design and delivery time
- Select the exact upgrades you want
- "Plug-and-play" seamless substation transformer connection
- Maintain vintage design with custom upgrades
- Environmentally friendly reuse of components

Remanufacturing Steps

- Ship your transformer to us
- Untank core and coil
- Analysis, inspection, & Final Scope of Work Report
- Redesign to meet your needs
- Rewind coils & reassemble tank
- Testing in accordance with IEEE Std C57.12.90™
- Delivered back to your substation

What You Get With Jordan Transformer

A company with a 50 year legacy of delivering an affordable, greener, and more reliable power transformer by remanufacturing America's substations, faster than OEMs.
